

Aeration

Aqua-Mini, Aqua-Maxi, Aqua-Hobby are floating Linn aerators that offer effective aeration but low power usage. They can be used in a wide range of applications, including fry ponds, cages, small and hobby ponds. With these aerators it is possible to support the growth of the fish and optimize the environment of the fish. All aerator models are lightweight and convenient to use!

The aerators enrich the water with oxygen and expel waste gases (such as carbon dioxide). The water surface is broken by waves, thus inhibiting, or even preventing the growth of algae. In natural ponds, the circulation created prevents foul, oxygen deficient water. The water remains healthy. Healthy water makes healthy fish!

In addition, all aerators offer a visually attractive fountain pattern. The range of sizes means that there is an ideal aerator for every size of pond! So, no energy is wasted needlessly by having an oversized aerator!

Aqua-Mini

Aqua-Mini

Aqua-Mini has a small, adjustable submersible motor. Because of the infinitely variable speed controller at the plug,* the power of the aerator can be adjusted optimally and tuned in to the size of the pond. This gives a particularly cost-effective and economical continuous operation. The intake screen (anodised aluminium) excludes plants and small fish and guarantees trouble-free operation. The screen basket is smooth, easy to clean and available with 2 or 6 mm slotted-holes.

Aqua-Mini is delivered ready for use with 10 m of cable and speed controller. It is recommended for ponds of area up to a maximum of 20 square metres.

Aqua-Maxi

Aqua-Maxi

Aqua-Maxi has a robust stainless steel submersible motor. The pump achieves great water circulation with low use of energy. The fountain pattern is created by a specially designed conical deflector. This achieves excellent aeration and a good current away from the machine, avoiding 'short-circuiting'.

The float of the **Aqua-Maxi** has an integral, practical handle. The screen is stainless steel with a standard bar spacing distance of 9.5 mm, with 5.5 mm available to order.

For an extra charge, the **Aqua-Maxi** can be supplied with a speed controller, which will enable the water delivery and capacity to be varied infinitely.*

Aqua-Maxi is known for its reliable pumping and its low susceptibility to clogging. This model is recommended for basins and natural ponds up to a maximum of 60 square metres.

Aqua-Hobby

Aqua-Hobby

Aqua-Hobby has an encapsulated motor, which is fixed in an aluminium protective casing onto the float above the water surface. It is virtually silent in operation. The water fountain automatically cools the motor.

Aqua-Hobby has a multitude of applications. This model offers very effective aeration at a relatively low price. The stainless steel screen basket (bar spacing 9.5 mm – also available with 5.5 or 18 mm spacing) of the Aqua-Hobby has a large surface area. It excludes large particles and fish from the pump chamber. **Aqua-Hobby** is suitable for ponds up to a maximum of 200 square metres (subject to stock levels).
